

SlugSense WebApp (User Manual and Clarification)

SlugSense-Webapp

Commitizen friendly

Prerequisite

#####Mac

Node 7.x.x (prefer 7.10.0)

brew install nvm (if you do not have homebrew, <https://brew.sh/>)

Make sure that your Homebrew is up to date before install

A version manager for node.js

brew info nvm

Follow the instruction to do the setup

nvm install 7

nvm use 7

NOTE***: everytime when you restart the terminal, the node version you use might change, export this line to your .bash_profile or .bashrc if you don't want to re-type this line everytime.

node -v (this will verify your current version)

Setup

#####Mac

git clone https://github.com/tingtingTT/SlugSense_WebApp.git

Switch to a proper branch for your development.

Some branches are protected, so you will not be able to merge into them. (Create a pull request if necessary)

Run Application

Go to SmartIrrigation-Webapp folder

Run *npm run dev* to go to the web page
