Sprint 2 Report

Product: SlugSense WebApp

Team: WebSwag Date: 07/18/2017

Scrum Masters: H. Bingham, Tingting Wang

- Actions To End (If we were to continue development)
 - We would be less hesitant to communicate with the mentors regarding difficulties with development because many errors and blockers in this sprint were caused by the backend, which they develop.
 - We would stop having a disorganized github repository.

Actions To Begin

- We would try to have the mentors all meetup in person in order to ensure that their ideas for our development are consistent.
- We would learn to use github in a better manner in order to make parallel development and merging code easier.
- We would communicate development changes more quickly to each other.

Actions To Maintain

- We would continue meeting up frequently.
- We would continue to

Work Completed

- The webapp now can get live data for a given week of a node instead of using default data.
- The sensor boxes at the top of the webapp now show the most recent reading for the selected node. The data now successfully changes when new nodes are selected.
- Various UI changes requested by our mentors were made. One of these changes were making the full graph visible upon opening the webapp.
- Additional documentation was added to the code.
- New login page was created.
- Real alerts based on node data were created. These alerts are shown both on the dashboard and in the Activity page, accessible via the navigation bar.
- Made the webapp adhere to material design guidelines.

Work Not Completed

- The user story related to improving the search functionality of the web application was aborted because a mentor had improved it while we were attempting to.
- Creating the login function for the login page that takes user credential and logs into the webapp was dropped due to time constraints and problems with the backend.
- The user story of making the "Day" and "Week" buttons responsive to resizing the window were dropped due to time constraints and incapability of figuring it out.
